DIGITAL VISIBILITY BRIEF — APR 2026

Platinum Construction Corporation

SEO STRATEGY.

A practical roadmap to make platinumconstruction.com discoverable on Google for the searches that actually win commercial-construction contracts in Ontario and beyond.

Prepared for	Scope	Document
Platinum Construction	New website launch	v1 — strategy

Why SEO matters for Platinum.

A — The Opportunity

Today, when a developer, franchise group or hotel ownership team in Ontario looks for a general contractor, their search starts on Google — not in the Yellow Pages. Whether they win a project or not depends largely on whether Platinum appears in the first five results.

92%	~46%	3×	27 yrs
SEARCHES END ON PAGE 1	HAVE LOCAL INTENT	CALLS VS. PAID ALONE	OF BRAND TO LEVERAGE

A.1 THE CURRENT SITE HAS THE CONTENT BUT NOT THE STRUCTURE

The legacy site at platinumconstruction.com communicates the brand well, but it was not built for search engines. There are no structured-data signals, no Open Graph metadata, no XML sitemap and no per-page descriptions tailored to keywords prospects actually type. As a result, Google treats Platinum as a generic page rather than as a 27-year-old commercial GC headquartered in Vaughan.

A.2 THE NEW SITE IS THE RIGHT MOMENT TO FIX IT

Rebuilding the site is a once-in-a-decade window to bake SEO into the foundation. The cost of doing it now is marginal; the cost of retrofitting it after launch is roughly 4× higher and risks losing whatever ranking has accumulated.

> **BOTTOM LINE** Platinum has the credentials, the brand and the portfolio. The strategy below makes Google see that — and translate it into qualified inbound leads from commercial developers, franchise teams and hotel ownership groups across Ontario.

Where we stand today.

A snapshot of the legacy site against the SEO basics every commercial website should have in 2026.

ELEMENT	STATUS	IMPACT
Per-page meta titles & descriptions	Partial	Generic, not keyword-targeted
Open Graph & Twitter cards	Missing	Bad previews on LinkedIn / WhatsApp / SMS
JSON-LD structured data (LocalBusiness)	Missing	No rich snippet, no Maps boost
XML sitemap & robots.txt	Missing	Google must discover pages by guesswork
Image alt attributes	Partial	Image search invisible, accessibility low
Heading hierarchy (H1 / H2 / H3)	OK	Already clean on the new build
Mobile-friendliness	OK	Responsive design in place
Page speed (LCP / CLS)	Partial	Hero video weight to optimize
HTTPS & canonical URLs	OK	Vercel handles HTTPS by default
Local SEO signals (Business Profile)	Not connected	Most direct miss for Vaughan / GTA leads

VERDICT The new website inherits a clean code base — but ships almost no SEO out of the box. Five focused interventions, described next, change that.

The five pillars.

Each pillar is a self-contained workstream. They compound: doing all five together produces a stronger result than the sum of parts.

PILLAR 01

ON-PAGE FOUNDATIONS

Unique, keyword-targeted title and description on every page. Canonical URLs. Open Graph and Twitter Card metadata so links shared on LinkedIn or WhatsApp render with the brand image and headline rather than a blank rectangle.

PILLAR 02

STRUCTURED DATA (JSON-LD)

Schema.org markup that tells Google explicitly what Platinum is: *LocalBusiness* in Vaughan, *GeneralContractor*, with phone, address, hours, areas served. Unlocks rich snippets and Google Maps visibility.

PILLAR 03

CRAWLABILITY

XML sitemap auto-generated and declared in *robots.txt*. Internal linking pattern that funnels authority toward the revenue pages (Services, Gallery, Contact). Submitted to Google Search Console day one.

PILLAR 04

LOCAL & BRAND SEO

Connect & optimize the Google Business Profile, align NAP (name / address / phone) across web, GBP and citations. Target high-intent local keywords: "commercial general contractor Vaughan", "franchise build-out Ontario", etc.

PILLAR 05

PERFORMANCE & CORE WEB VITALS

Compress and lazy-load the hero and project videos, defer non-critical JS, preconnect to font CDNs. Targets: **LCP < 2.5s**, **CLS < 0.1**, **INP < 200ms** on a mid-tier mobile over 4G — the thresholds Google uses as a ranking signal.

What changes, concretely.

Two before / after examples to make the intervention concrete. These changes are invisible to the visitor but strongly visible to Google.

EXAMPLE 1 — THE PAGE HEADER

Before

```
<!-- index.html -->
<title>Platinum Construction Corporation — Building Excellence Since 1997</title>
<meta name="description" content="Platinum Construction Corporation — Commercial general
contractor..." />
```

After

```
<!-- index.html -->
<title>Commercial General Contractor in Vaughan, ON | Platinum Construction</title>
<meta name="description" content="Platinum Construction is a Vaughan-based commercial general
contractor delivering franchise rollouts, hotel turnkeys and design-build across Ontario since
1997." />
<link rel="canonical" href="https://platinumconstruction.com/" />
<meta property="og:title" content="Platinum Construction — Commercial GC Vaughan, ON" />
<meta property="og:image" content="https://platinumconstruction.com/og-cover.jpg" />
```

EXAMPLE 2 — TELLING GOOGLE "WE ARE A REAL LOCAL BUSINESS"

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "GeneralContractor",
  "name": "Platinum Construction Corporation",
  "foundingDate": "1997",
  "address": { "streetAddress": "83 Citation Dr. Unit 2",
               "addressLocality": "Vaughan",
               "addressRegion": "ON",
               "postalCode": "L4K 2Z6" },
  "telephone": "+1-905-763-8119",
  "areaServed": [ "Ontario", "Greater Toronto Area" ],
  "sameAs": [ "https://facebook.com/...", "https://linkedin.com/..." ]
}
</script>
```

WHY IT MATTERS This single block is what makes Platinum show up in Google Maps, in the "knowledge panel" on the right side of brand searches, and as a result with phone + hours + reviews instead of just a blue link.

Timeline & expected results.

The work is scoped to ship alongside the new website launch, with a follow-up checkpoint at 90 days to measure traction.

PHASE 01 · WEEK 1

ON-PAGE FOUNDATIONS & STRUCTURED DATA

Per-page titles, descriptions, canonicals, Open Graph metadata, JSON-LD blocks. Sitemap.xml + robots.txt generated and submitted to Google Search Console. Bing Webmaster Tools registered in parallel.

PHASE 02 · WEEK 2

PERFORMANCE & IMAGE OPTIMIZATION

Hero and project videos re-encoded, lazy-loading rolled out across the gallery, alt attributes written for every project photo. Lighthouse audit pass: target 90+ on Performance / SEO / Accessibility.

PHASE 03 · WEEK 3–4

LOCAL SEO ACTIVATION

Google Business Profile claimed, photos uploaded, services and service areas configured. NAP citations checked across Yelp, Yellow Pages, BBB. First three project case-studies published as long-form pages with location keywords.

PHASE 04 · DAY 90

MEASUREMENT & ITERATION

Search Console review: indexed pages, impressions, click- through rate, top-ranking queries. Identify the keywords showing momentum and double down with new content. Adjust based on what real Ontario prospects are typing.

E.1 WHAT SUCCESS LOOKS LIKE AT 90 DAYS

- **100%** of pages indexed in Google Search Console (vs ~partial today)
- **Brand search** "Platinum Construction Vaughan" returns the new site #1, with the knowledge panel populated
- **Google Maps** listing live with photos, hours and direct contact

- **Top-3 ranking** on at least two long-tail commercial queries (e.g. "franchise build-out contractor Ontario")
- **Lighthouse SEO score ≥ 95** on every page

BUILD IT ONCE. BE FOUND FOR YEARS.

SEO is the only marketing channel that pays compounding interest: every fix made today keeps generating qualified leads next year. Let's make sure the new platinumconstruction.com is worth the click — and that the right people find it.
